CARRER OBJECTIVE:

Junior CS student and Full-Stack .NET developer with a rigorous background in **competitive programming** and systems engineering. Proven ability to architect various solutions—from low-level OS memory management in C to high-performance **RESTful APIs** in **ASP.NET Core**. Seeking to leverage my analytical problem-solving skills and enthusiasm to contribute to an innovative engineering team.

EDUCATION

Ain Shams University - Faculty of Computer and Information Sciences

Cairo, EG

Bachelor's in Computer Science - GPA: **3.892** (A-)

Sep 2023 – Jul 2027

- **Relevant Coursework:** OOP, Operating Systems, Data Structures, Algorithms, Computer Architecture, Database Management Systems, Software Engineering, System Analysis and Design, AI & Machine, Software Engineering.

EXPERIENCE & TRAINING

Digital Egypt Pioneers Initiative (DEPI)

Cairo, EG

Full Stack .Net Trainee - Present

Nov 2025 – Jul 2026

- Developing **back-end** systems using **.NET** and **C#**, architecting secure **ASP.NET Core Web APIs** and **MVC** structures to deliver high-performance **RESTful API** services and server-side logic.
- Mastering **relational database** management through **SQL Server**, including writing complex queries, **designing schemas**, and ensuring data integrity for web applications.
- Building responsive and interactive user interfaces by integrating **HTML5**, **CSS3**, and **JavaScript** with modern containerization practices using **Docker** for consistent environment deployment.

ApplAi Student Activity

Cairo, EG

Machine Learning Trainee

Jul 2024 – Aug 2024

- Completed hands-on training covering machine learning workflow, including data preprocessing, feature engineering, model training and evaluation. **(Certificate)** 
- Gained practical experience using Python and key machine learning libraries : **sklearn**, **numpy**, **pandas**, **Matplotlib**.
- Applied these skills by developing a capstone prediction model using **Python**, **Jupyter**, Google **Colab** and focusing on model performance evaluation. **(Colab Notebook)** 

ACM ASCIS

Cairo, EG

Algorithmic Problem-Solving Trainee

Nov 2023 – May 2024

- Completed intensive **ACM ASCIS (Levels 1 & 2)** training, mastering advanced **Data Structures and Algorithms** to optimize code performance and execution time through solving diverse problem sets.
- Participated in various **onsite and virtual programming contests**, solving complex logic challenges under pressure while utilizing rigid **debugging** and **analytical thinking** techniques.
- Participated in ECPC Qualifications 2025 **(Certificate)** 

PROJECTS

FOS Operating system – OS Team Project 

Jan - 2026

- Leveraged **C** to architect core operating system components, focusing on low-level system efficiency and stability.
- Implemented **virtual memory and page fault handling** with multiple page replacement algorithms.
- Developed **kernel and user memory management**, including dynamic allocation and **shared memory** mechanisms.
- Implemented **process synchronization** and **CPU scheduling** to manage multiple processes and prevent system deadlocks.

Image Segmentation – Algorithms Team Project 

May - 2025

- Contributed to developing an **image segmentation tool** that partitions images based on **color similarity** for object detection and image editing tasks.
- Collaborated within a team to **design** and implement **efficient algorithms in C#**, focusing on performance and accuracy.

Watch it Clone – OOP Team Project 

Jan - 2025

- Led a team to develop a Watch It streaming platform App clone using **Java** and **JavaFX**.
- Applied **Object-Oriented Programming** principles and **clean code** best practices to build a maintainable and scalable application.
- Developed core features including user subscriptions, content discovery, basic **recommendation system**, and admin management tools

Auction Management System - Database Management Team Project

Jan - 2025

- Designed the **ERD** and relational **database schema**, ensuring proper constraints and data integrity.
- Implemented and managed the database using **Oracle DBMS**, optimizing queries and ensuring efficient data handling.
- Used **SQL & PL/SQL** to Query and Manage the Data

SKILLS

- **Programming Languages:** Python, Dart, C#, C++, Java, JavaScript
- **Technical Skills:** SQL Server, Git, GitHub, JIRA, SDLC, LINQ, .NET Core, ADO.NET, EF Core, HTML, CSS
- **Non-Technical:** Problem Solving, Teamwork, Communication, Adaptability, Fast and Continuous Learner
- **Languages:** English (intermediate), Arabic (Native)
