CAREER OBJECTIVE

Junior CS Student and **Full-Stack .NET Trainee at DEPI**. Highly curious **tech enthusiast** who constantly explore new technologies, algorithms, AI tools and emerging ways to solve **real world problems.** Actively seek opportunities to learn, adapt, and contribute meaningfully to innovative development teams.

EDUCATION

Ain Shams University, Faculty of Computer and Information Sciences — Cairo, EG
Bachelor's in Computer Science , GPA: **3.892** (A-) — 09/2023 – 07/2027

- **Relevant Coursework**: OOP, Operating Systems, Data Structures, Algorithms, Computer Architecture, Database Management Systems, Software Engineering, System Analysis and Design , AI & Machine Learning

EXPERIENCE & TRAINING

Digital Egypt Pioneers Initiative (DEPI) — Cairo, EG
Full Stack .Net Trainee - Present — 11/2025 – 07/2026

- Developing **back-end** systems using **.NET** and **C#**, architecting secure **ASP.NET Core Web APIs** and **MVC** structures to deliver high-performance **RESTful API** services and server-side logic
- Mastering relational database management through **SQL Server**, including writing complex queries, designing schemas, and ensuring data integrity for web applications.
- Building responsive and interactive user interfaces by integrating **HTML5**, **CSS3**, and **JavaScript** with modern containerization practices using **Docker** for consistent environment deployment.

ApplAi Student Activity — Cairo, EG
Machine Learning Trainee — 07/2024 – 08/2024

- Completed hands-on training covering machine learning workflow, including data preprocessing, feature engineering, model training and evaluation. Gained practical experience using Python and key machine learning libraries. **(Certificate)**
- Applied these skills by developing a capstone prediction model using **Python**, **Jupyter** , Google **Colab** and focusing on model performance evaluation. **(Colab Notebook)**

ACM ASCIS — Cairo, EG
Algorithmic Problem-Solving Trainee — 11/2023 – 05/2024

- Completed intensive **ACM ASCIS (Levels 1 & 2)** training, mastering advanced **Data Structures and Algorithms** to optimize code performance and execution time through solving diverse problem sets.
- Participated in various **onsite and virtual programming contests**, solving complex logic challenges under pressure while utilizing rigid **debugging** and **analytical thinking** techniques.
- Participated in ECPC Qualifications 2025

PROJECTS

FOS Operating system – *OS Team Project* — Jan - 2026

- Leveraged **C** to architect core operating system components, focusing on low-level system efficiency and stability.
- Implemented **virtual memory and page fault handling** with multiple page replacement algorithms.
- Developed **kernel and user memory management**, including dynamic allocation and **shared memory** mechanisms**.**
- Implemented **process synchronization** and **CPU scheduling** to manage multiple processes and prevent system deadlocks.

Image Segmentation – *Algorithms Team Project* — May - 2026

- Contributed to developing an **image segmentation tool** that partitions images based on **color similarity** for object detection and image editing tasks.
- Collaborated within a team to **design** and implement **efficient algorithms in C#**, focusing on performance and accuracy.

Watch it Clone – *OOP Team Project* — Jan - 2025

- Led a team to develop a Watch It streaming platform App clone using **Java** and **JavaFX**.
- Applied **Object-Oriented Programming** principles and **clean code** best practices to build a maintainable and scalable application.
- Developed core features including user subscriptions, content discovery, basic **recommendation system**, and admin management tools

Auction Management System - *Database Management Team Project* — Jan - 2025

- Designed the **ERD** and relational **database schema**, ensuring proper constraints and data integrity.
- Implemented and managed the database using **Oracle DBMS**, optimizing queries and ensuring efficient data handling.
- Used **SQL** & **PL/SQL** to Query and Manage the Data.

SKILLS

- **Programming Languages:** Python, Dart, C# , C++ , Java , JavaScript
- **Technical Skills:** SQL Server, Oracle DBMS, Git, GitHub, JIRA, SDLC, LINQ, .NET Core , HTML , CSS , AI Tools
- **Non-Technical:** Problem Solving, Teamwork , Communication , Adaptability , Fast and Continuous Learner
- **Languages:** English (intermediate) , Arabic (Native)
